Water Quality Notice for Mission Residents

ABBOTSFORD - June 13, 2024 - Abbotsford Mission Water and Sewer Services is advising that some Mission residents may notice an unusual taste and odour in their drinking water from the Cannell Lake water supply. Water remains safe to drink and is not a health concern.

Naturally occurring algae in the lake, typically observed at higher levels this time of the year, are known to produce off-flavors that some describe as fishy or metallic. It is a seasonal and temporary aesthetic change.

Water from this source is regularly sampled and tested and the water quality samples continue to meet Provincial water quality standards.

A carbon filter, such as those from Brita Canada or similar device, may alleviate the smell and taste.

Abbotsford Mission Water and Sewer Services supplies municipal water to Abbotsford, Mission and a small part of the Fraser Valley Regional District. For additional information regarding Abbotsford and Mission's water quality, please visit ourwatermatters.ca/water-quality.

Residents who are impacted may notify the City of Mission at 604-820-3761 of any water quality issues.
